

CS571 Lab 5

1. You are provided a data file `data_records.txt` which contains information about employees. Write a Python program that reads this file and obtains the following information.
 - a) Determine the total number of employees in each department.
 - b) Display the number of employees department wise, for each city.
 - c) Create a new csv file with two columns, which gives employee_name, location.
2. Given the file `result.txt`, determine the sum of each individual entry. Write the result as a 2-column csv file.
